Tank Planner

Six fermenters, twelve weeks and a stream of orders. Plan your tanks to deliver the right beer on time.

You need

- One planner sheet and a pencil per player.
- The order and event cards, shuffled into one deck.

The beers

- **Lager** takes 4 weeks in a tank.
- **Stout** takes 3 weeks in a tank.
- **IPA** takes 2 weeks in a tank.
- **Wheat** takes 2 weeks in a tank.

Each week

1. **Reveal.** Turn over the top card. An order stays face up until it is delivered or its due week passes. An event applies this week only.
2. **Brew.** Start beers in any empty tanks. Write the letter in a box for each week it needs, starting this week. Each brew costs ₹20.
3. **Deliver.** A beer is ready at the end of its last week. Use ready tanks of the right beer to fill a face-up order and take the card. Players claim orders in turn. The first player moves left each week.
4. **Stale beer.** Ready beer not delivered within 2 weeks is dumped. Cross it out.

Winning

After week 12, add up income from delivered orders and take away ₹20 for every brew you started. The biggest profit wins. Solo players: beat ₹600, then try for ₹800.

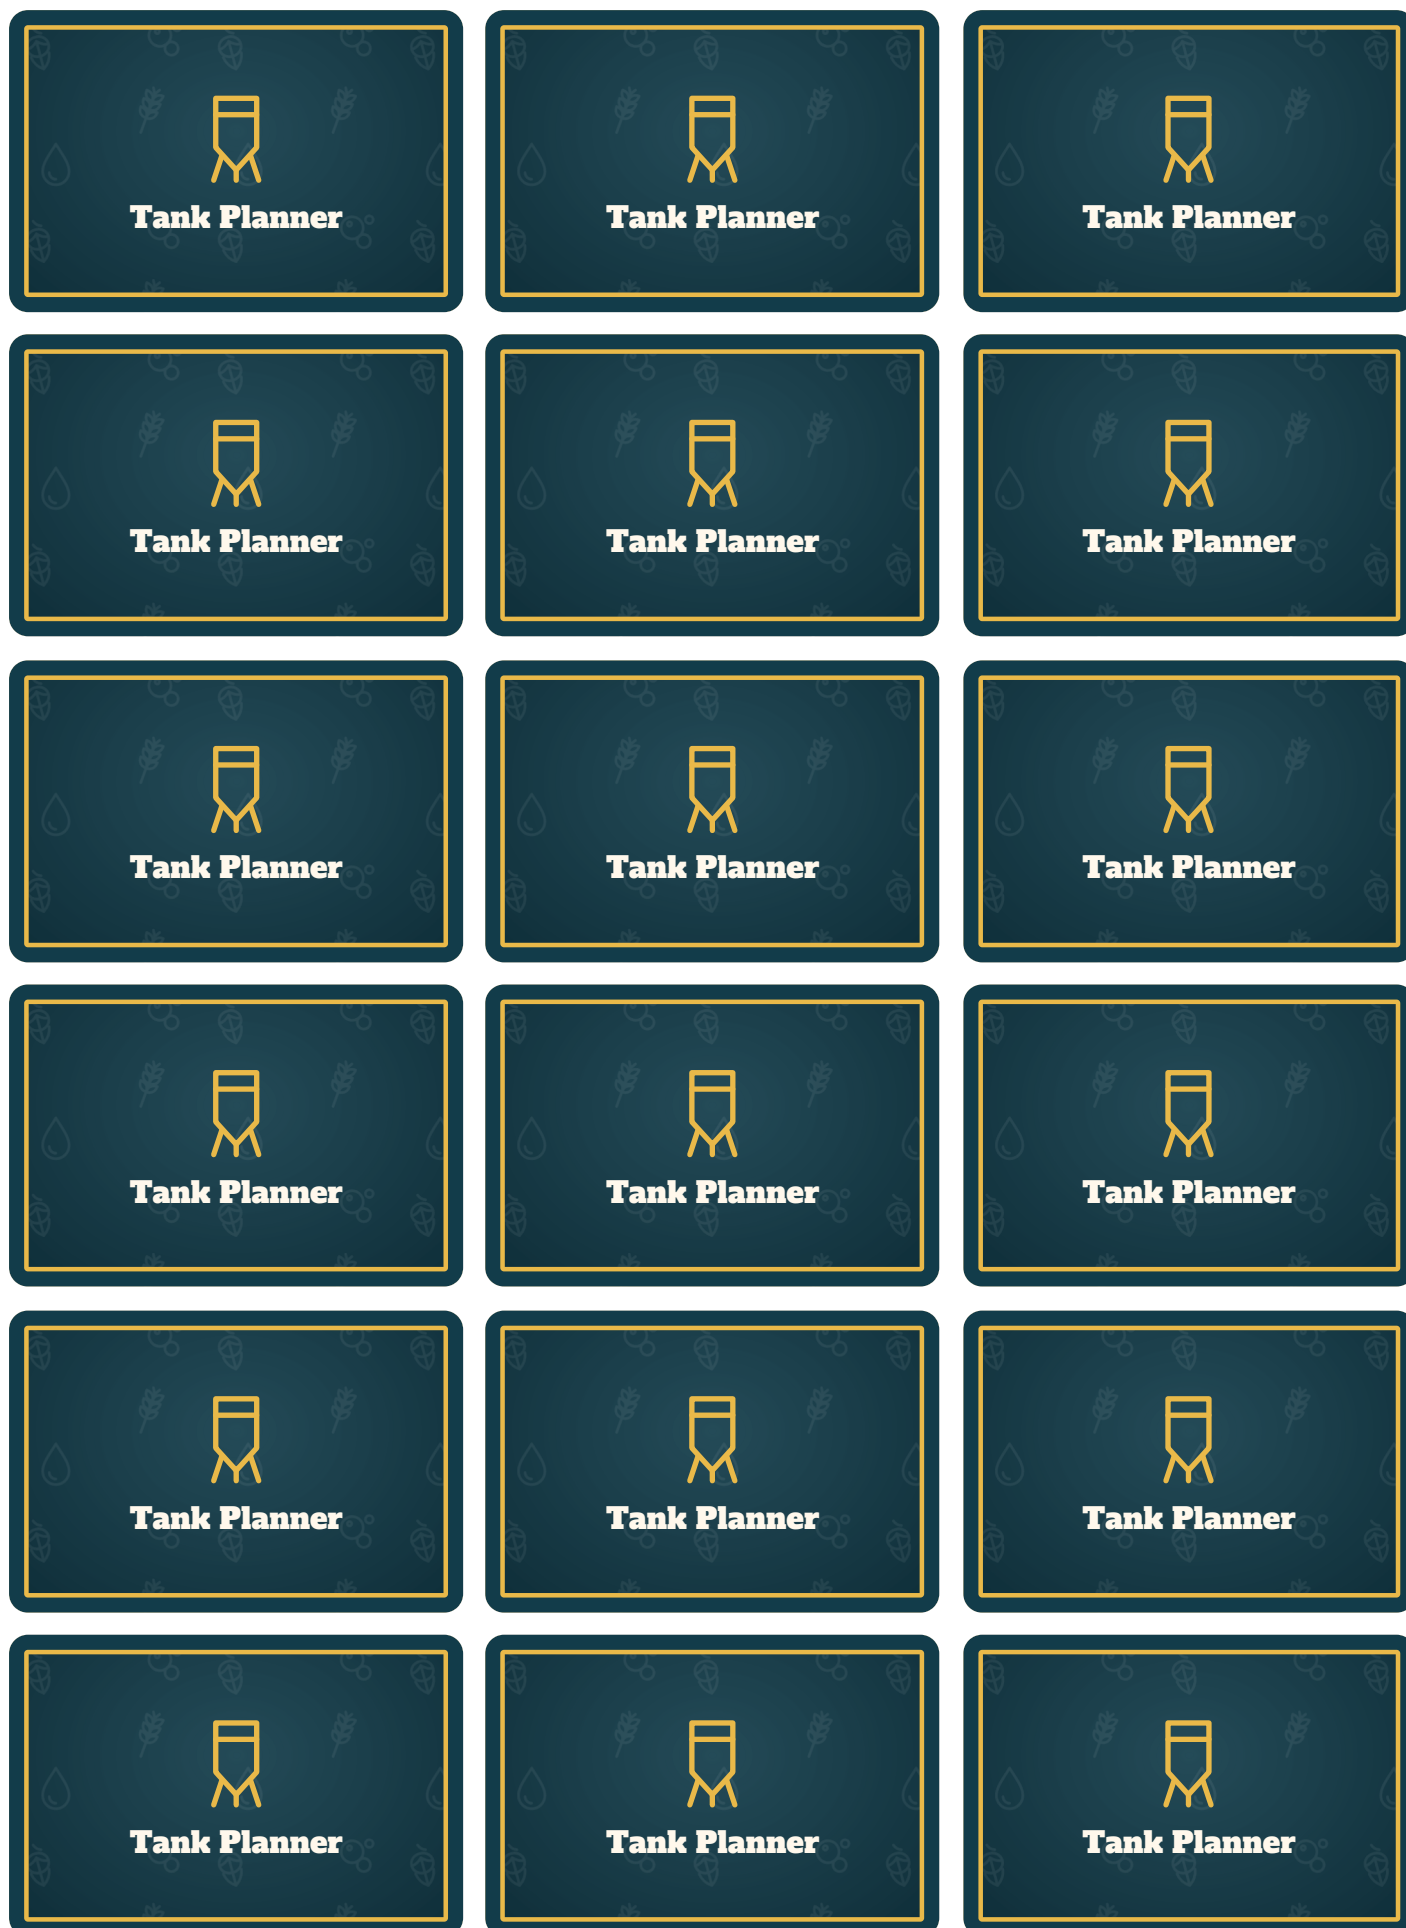

The real lesson. Lagers tie up a tank for twice as long as ales, so they need higher prices or longer notice. Planning tank time against demand is one of the first places breweries use data and forecasting.

Order and event cards. Cut along the edges.

Order: Taproom  1 * IPA Due by the end of week 4. Pays ₹50.	Order: Taproom  1 * Wheat Due by the end of week 4. Pays ₹45.	Order: Hotel chain  1 * Lager Due by the end of week 6. Pays ₹70.
